```
firebird.conf
# =====
# Settings for parallel work
# =====

# -----
# Limits the total number of parallel workers that can be created within a
# single Firebird process for each attached database.
# Workers are accounted for each attached database independently.
#
# Valid values are from 1 (no parallelism) to 64. All other values
# silently ignored and default value of 1 is used.
# Per-process.
```

```
#
# Type: integer
#
#MaxParallelWorkers = 1

# -----
# Default number of parallel workers for a single connection. For more details
# see doc/README.parallel_features.
#
# Valid values are from 1 (no parallelism) to MaxParallelWorkers (above).
# Values less than 1 are silently ignored and default value of 1 is used.
# Per-process.
#
# Type: integer
#
#ParallelWorkers = 1
```
